162 EZ Off-Road Mirror

Tool-free adjustment and secure positioning of the mirror—quick and easy to set exactly where you need it.

A lightweight, foldable mirror designed specifically for off-road motorcycles. The pivot mechanism allows for fine angle adjustment, and the mirror can be folded inward during aggressive riding to help prevent damage. A quick-adjust knob enables easy, tool-free positioning and secure locking. Once securely fixed, vibration is reduced while riding, improving visibility. Features an impact-absorbing design.

Bike-Specific Design
Easy Bolt-On Installation

Adventure Windshield

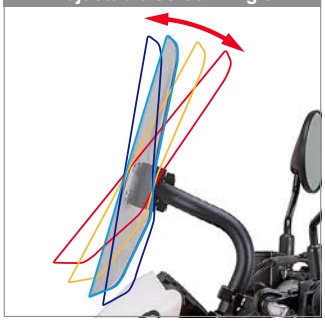

Integrated movable screen and mobile mounting bar

Adventure-ready windscreen kit featuring an integrated screen and mobile mounting bar. Engineered for your specific motorcycle model, it installs easily with a simple bolt-on setup. The screen is crafted from durable polycarbonate for excellent impact resistance, while the mounting bar is made from high-strength aluminum alloy for reliable support.
For customizable visibility and styling, the screen can be mounted upside down. The sturdy mounting bar keeps both the screen and your mobile devices secure, even on rough trails. The screen's height and angle are fully adjustable, allowing you to fine-tune visibility and styling to your preference.

ZETA RACING

TITAN BOLT & NUT SERIES

Hot Forging / Machining / Thread Rolling

ZETA titanium products feature a simple design with no unnecessary decorative machining.
Every process is focused on maximizing the inherent benefits of titanium.
Hot forging gives the material a tensile strength that exceeds its original strength, while precision machining ensures optimal quality of the head.
The high-strength material also allows a smaller design, reducing weight even further.
The rolled threads are work-hardened through plastic deformation, providing 1.5 times the strength of cut threads.
(Use of an anti-seize compound is recommended.)

Made from Grade 5 Titanium

In Japan, it is commonly known as "64 Titanium," while the U.S. ASTM standard refers to it as "ASTM B348 Grade 5." The designation "Ti-6Al-4V" indicates its chemical composition, containing 6% aluminum (Al) and 4% vanadium (V) by mass.
Widely used in medical applications such as implants and artificial bones, it is also valued for its high strength in aircraft, aerospace, nuclear power, industrial turbines, automotive and motorcycle mufflers, golf club heads, and more.
Ti-6Al-4V accounts for approximately 70% of all titanium alloys, making it the most widely used titanium alloy.

Lightweight	Specific gravity: 4.5 55–60% the weight of steel
High Strength	Tensile strength: 900+ N/mm², comparable to SCM435 chrome moly steel (930 N/mm²).
Corrosion Resistant	Forms a passive oxide film for lasting corrosion resistance.
Eco-Friendly & Safe	Biocompatible and recyclable; widely used for implants and artificial bones.
Beautiful	Corrosion-resistant and ideal for decorative use.
Difficult to Machine	Requires advanced machining, forming, and welding techniques.
High Cost	Rare and Difficult to Refine and Process
Seizing / Galling	Prone to Seizing and Galling Under Friction

Strength Comparison of Titanium Grades and Other Metals

Commercially Pure Titanium: Less expensive than other titanium alloys. Excellent corrosion resistance, but lower strength.

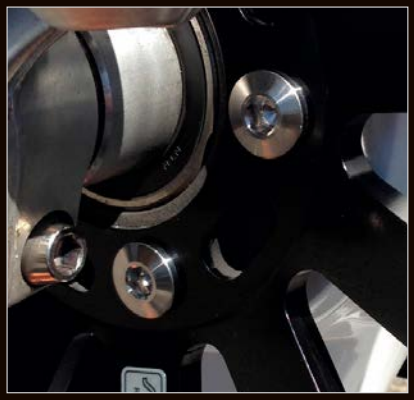

Alpha Alloy: Excellent creep resistance (resistance to deformation under long-term stress). Good weldability, but poor machinability.

Beta Alloy: The highest strength among titanium alloys. Excellent machinability, strength, ductility, and toughness, but very high production costs.

Alpha-Beta Alloy: ZETA titanium products use Ti-6Al-4V, an alpha-beta titanium alloy.

Name	Alloy Name	Tensile Strength
Commercially Pure Titanium	JIS Class 1	275~412N/mm²
Commercially Pure Titanium	JIS Class 2	343~510N/mm²
Commercially Pure Titanium	JIS Class 3	481~618N/mm²
α Alloy	Ti-5AL-2.5Sn	850N/mm²
α-β Alloy	Ti-6AL-4V	900N/mm²
β Alloy	Ti-15Mo-5Zr-3A1	1470N/mm²
Other Metals	Alloy Name	Tensile Strength
Duralumin	2017-T4	425N/mm²
Super Duralumin	2024-T361	495N/mm²
Extra Super Duralumin	7075-T6	481~618N/mm²
General Structural Steel	SS400	400N/mm²
Carbon Steel	S45C	570N/mm²
Chrome Moly Steel	SCM435	930N/mm²

AR-1 WHEEL KIT

AR1 Wheel Kit

MORE DETAIL

A racing-spec complete wheel kit combining R50 rims with Asterite hubs. Available in OEM sizes for competition bikes, plus 18-inch options ideal for converting motocrossers to enduro machines. Also available for trail models with the same specifications.

The Asterite hub is precision-machined from aluminum alloy for reduced weight compared to OEM hubs. All internal components, including bearings, are pre-installed.

Features the racing-spec R50 rim made from A7050-T6 aluminum alloy for an optimal balance of strength and weight.

Uses Z-WHEEL aluminum nipples and stainless steel spokes.
