

Installation instructions

ZETA Specialized Handlebar CT125 Trail125

Thank you for purchasing this ZETA product.

Please read these instructions carefully before installing.

1. Important note

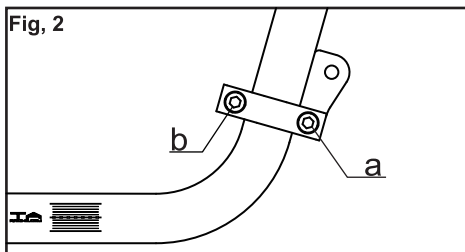

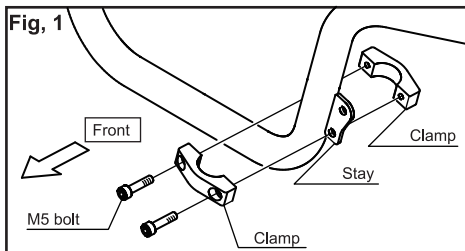

- Please do not modify this product.
- This kit can not be used with other optional parts if they interfere with this product.
- Special knowledge and skill are required for installation. Careless work may cause an unexpected accident or malfunction.
- The stock bar end plugs and weights can not be used.

2. How to install the handlebar

- 1) Remove the stock bar end plug.
 - * For removing the stock bar end plug, refer to the service manual and service information.
 - * The stock bar end plug is firmly installed. Please prevent the bar end plug from rotating and use a shock driver, etc. Please proceed to the work carefully so that the bolts will not be damaged.
- 2) Remove each part such as the switch box and blinker installed to the stock steering wheel, and remove the stock steering wheel from the bike.
 - * Refer to the service manual and service information for removing each part.
- 3) Install this product on the bike in the reverse order of removing the stock handle.
 - * When installing the stock miller clamp, be careful not to damage the handle.

3. How to install the blinker

- 1) Temporarily assemble the stay and clamp to the left and right using the included bolts. (Fig. 1)
- 2) Adjust the stay so that it faces the front, and then fully tighten from part "a", and finally tighten b. (Fig. 2)
 - * Refer to the stock position for the mounting height.
- 3) Install the blinker to the stay in the same way as the stock one.
 - * Adjust the angle of the handlebar body so that the blinker is in front.

4. ZETA Adventure Armor Guard / ZETA Bar End Plug (sold separately)

- ZETA Adventure Armor Guard CT125 / Trail125 can be installed.
- ZETA bar end plug series can be installed.

Adventure Armor Hand Guard CT125 / Trail125 Black : ZE72-6031
